

Please thoroughly read the below and understand our Hand Sanitizer Waiver. Return with a signature presented before beginning your No-Chip Manicure/Pedicure or Dip-Powder service.

---

The use of Alcohol-Based hand sanitizer can cause harm to one's fingernails and could ruin a fresh new manicure. The alcohol in many hand sanitizers can dry out polish and crack cuticles, causing polish to chip. Fingernails are made of a tough protein called Keratin, which requires plenty of hydration to keep nails strong and flexible. Without moisture, fingernails will become brittle and weak causing them to crack and break, while healthy fingernails, which are properly hydrated, should bend.

**Use of Alcohol-Based Hand Sanitizer can cause:**

- Chipping as early as 3 days (In some cases)
- Hand sensitivity under UV lamp
  - Note: Nail Tech's will be utilizing sunscreen for your hands before going under the UV light.

Salon Anovin cannot guarantee that a No-Chip Manicure and/or Dip-Powder will last as long as it has in the past. Due to alcohol-based hand sanitizer, it's very likely that the fresh manicure will chip. For appointments made to fix chipped manicures will incur a \$7 charge.
